No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein search, using sw model

I development and floral organogenesis. Functions with development and floral organogenesis. Functions with SEPALLATA/AGL2 and SEPALLATA/AGL4 to ensure proper development of petals, stamens and carpels and to prevent the indeterminate growth of the flower meristem. Interacts with APETALAI, AGAMOUS CAPETALAI, AGAMOUS C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN-cv.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           within petals, stamens, and carpels.
MISCELLANEOUS: Triple mutations in the SEP1, SEP2 and SEP3 result in the replacement of the stamens and petals by sepa of the carpels by a new mutant flower with sepaloid organs. Solitarity: BELONGS TO THE MADS DOMAIN FAMILY OF TRANSCRIPTED 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            genes regulation during floral meristem development. SUBUNIT: Heterodimer with Apl or AG capable of binding sequences. Binds AP3/PI to form a ternary complex. SUBCELLULAR LOCATION: Nuclear (By similarity). DEVELOPMENTAL STAGE: Expressed early during flower devenithin petals, stamens, and carpels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILARITY: Contains 1 K-box dimerization domain.

kidney, and small intestine.

DISEASE: Defects in CYP7B1 are a cause of neonat hepatitis (MIM:331100). Patients present severe cirrhosis and liver synthetic failure.

SIMILARITY: Belongs to the cytochrome P450 family
